## PROFILE

Young self-directed developer in Pakistan building product websites, full-stack web apps, mobile interfaces, APIs, databases, and desktop utility experiences. Focused on clear systems, responsive layouts, practical performance, and polished interaction design.

## SELECTED WORK

|                   |                                                                                                                                      |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <b>Portfolio</b>  | Immersive portfolio with animated navigation, six color themes, project cases, reviews, and an interactive technical stack.          |
| <b>FrameBoost</b> | Performance product website and macOS/Windows utility interfaces covering optimization, monitoring, cleanup, backups, and game mode. |
| <b>Frame Code</b> | Premium software-studio website presenting custom cross-platform builds, pricing, reviews, and product capabilities.                 |
| <b>FrameX</b>     | Gaming compatibility website explaining Windows-on-Mac support, compatible titles, features, and download paths.                     |

## SKILLS

|                   |                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>  | Java, JavaScript, TypeScript, Python, HTML, CSS, Tailwind CSS                                                                  |
